

# serviceMaster

The smart platform for smart service

# Schulthess serviceMaster.

## The clever all-in-one platform for more options

With the new Schulthess serviceMaster you maintain a maximum overview of your communal laundry, laundry or laundromat. Simple digital dashboards and analysis tools help you increase the efficiency of washing processes and improve machine availability. In addition, the automatically triggered service ensures that your machines function perfectly and reliably. serviceMaster is a clever tool, developed by smart minds for you and your needs.

# One platform. Many options.

Whether property managers, hotels, hospitals or laundromat operators: serviceMaster is flexible and adapts exactly to your requirements. The **basic module** contains everything that makes it easier for you to manage the machines and increases efficiency. And with the **additionally available modules**, you can ensure that serviceMaster becomes your very own indispensable tool.

## Basic module

### Smart Monitoring

In the event of an error message, your service partner is automatically notified. It is also possible to manually add a ticket – this guarantees that any problem is solved quickly.

### Spare Part Flash

serviceMaster analyses the machine data and suggests spare parts in good time. This prevents problems and ensures flawless all-round operation in your laundry.

### Proactive Maintenance

serviceMaster keeps an eye on maintenance work and the Clean Service and notifies you in good time when work is due. Because prevention is always better than repair.

### Smart Asset Management

See in real time, wherever you are, whether your machines are working. You can view, allocate and filter your assets across multiple sites.

## Additionally available modules

### EasyLive Control

View machine data clearly in dashboards and get a live overview of the utilisation of your laundry rooms and laundries. This makes it easier to avoid bottlenecks and to optimise processes.

### Easy Reporting

Dashboard and analysis tool data can be easily exported into Excel, giving you the chance to analyse this data further or even present it.

### Laundry Report

Exactly how high is your mountain of washed and dried laundry? serviceMaster knows and shows you at the touch of a button.

### Better go green

The consumption report shows how much water and electricity your machines consume, improving energy efficiency in a targeted manner.

### Hygiene Monitoring

Digital hygiene monitoring can be relied upon: It stores the hygiene certificate directly on a separate tamper-proof dedicated memory (FINRA & CFTC compliant). If a certificate is not complied with, you will be informed directly.

### Remote Updates

Manage customised programmes or type and amount of liquid detergent when and where you want. The secure cloud makes it possible – and makes you independent.

### Managed Solution

serviceMaster has open web-based interfaces, making it easy to integrate it into your enterprise solutions and ensuring lean processes with a common database.

# The serviceMaster benefits.

## Save time

serviceMaster automatically informs your service partner about pending repairs and transmits all the information it needs for troubleshooting. For genuine time saving.

## Boost profitability

serviceMaster provides a crystal-clear overview of all the relevant data such as utilisation, consumption and availability. For laundry rooms, laundromats and laundries that are profitable.

## Increase flexibility

serviceMaster provides you with programme and liquid detergent controls via the cloud. For maximum flexibility, wherever and whenever.

## Consumption statistics made easy

serviceMaster shows you the exact water and power consumption of your machines. For even easier energy saving.

## Ensure hygiene automatically

serviceMaster gives you peace of mind when it comes to hygiene. It monitors compliance with cleaning and disinfection protocols. For automation of your compliance.

## Sustainable system

serviceMaster is based on the Schulthess IoT platform and is therefore certified, sustainable and secure as well as open for connection to third-party systems. For flawless processes.

Existing appliances are  
easily integrated  
into serviceMaster  
via a retrofit.

Schulthess knows what is important for machines in communal laundries, laundries and laundromats. Which is why we put great store on robustness, hygiene, short washing and drying times, energy efficiency – and of course sustainability – in our appliances.
